## What is a Locker ?

The traditional Parcel Locker is similar to a vending machine intended for both delivery and/or collection of parcels and correspondence, operating 24/7.

Lockers in their many forms today represent a contactless solution and their use is recommended also in the Covid19 prevention protocols.

Combining technology, connectivity, software and the modular space of lockers, SmartLockers are intelligent lockers which find application in the most varied fields, such as depositing goods and recharging battery-powered devices, delivering fresh, frozen and warm food, collecting goods and paying for them.

They are, indeed, state-of-the-art vending machines which allow the collection and short-term storage of goods and documents 24 hours a day, 365 days a year. They provide scalable storage solutions that support dynamic remote assignment, 7 days a week secure keyless access, end-to-end custody, providing detailed usage reporting.

## How does it work?

**Place an order on  
your favourite  
online shops**

**Your parcel will be  
delivered to a  
LockerFarm locker**

**You will get a  
message when the  
parcel is delivered**

**Use the PIN or QR  
code to get your  
parcel**

When you are purchasing something, you will only have to indicate the placement of the locker instead of your own address. The locker might be located at your workplace, your apartment building, in a public place or be part of an open network of lockers.

Once the order is processed, the courier will access the locker by typing the recipient's e-mail address, mobile phone number, name or code on the screen.

One of the locker doors will open for the parcel to be deposited. Once closed, the system will automatically send an e-mail or a SMS to the recipient with the PIN or QR code. To collect the parcel, simply enter the PIN code or scan the QR code on the locker camera.

Our lockers can also be used to deposit objects, documents and parcels of various sizes, to return products or to collect goods left by someone else.

## Parcel lockers

These lockers are the ideal solution for companies and their employees welfare. Incoming and outgoing letters and parcels won't clog the reception anymore but will be directly place in the locker.

They can also be used to temporarily deposit books, laptops and backpacks at universities and in schools.

**Advantages:** Employees and students can have their purchases delivered directly to their workplace or university with a reduction of liability, guaranteed privacy and time saved.

## Luggage lockers

These lockers are perfect for stations, airports, place of transit and more. Convenient and advantageous also for hotels, tourist residences, shopping centers and universities and, in general, all places where it may be necessary to store one's luggage temporarily.

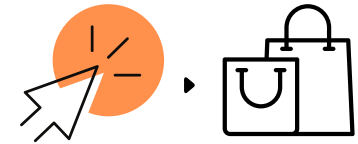

## Lockers for dry cleaners

These lockers are very useful for picking up clothes and garments left at the dry cleaners, but also at hotels, hospitals and schools. They're obviously customizable with compartments of various sizes, suitable for hanging clothes.

## Click&Collect lockers

These lockers are available for physical stores that also sell online.

The customer places the order and pays online. The goods are prepared and placed in the locker inside the shop. The customer will then receive a notification and can go collecting their order independently and contactless directly from the locker, avoiding unnecessary queues.

## Residential Lockers

Residential lockers are made to be installed inside condominiums or residential complexes.

No more deliveries missed when the residents are away!

Couriers must of course have the possibility to independently access the locker in the building or in the yard.

The courier will deposit the parcel in a locker compartment accessible only to the recipient, who can get their parcel at any moment using the chosen collecting method.

This is very convenient and saves time to the recipient, who won't have to go get their parcel from generic collection points, but will have it delivered directly to their house.

The entire delivery process is traceable.

## KeyLocker

KeyLocker is a multi-functional mini locker, extremely useful for depositing and collecting small objects, such as keys and small parcels. It is very intuitive and easy to use and, according to the model, it is possible to customize the dimension of its compartments.

It can be installed in offices, apartment buildings and residential complexes.

KeyLocker is equipped with a touch screen, a computer system, document reader, lock control card and other intelligent control systems.

The owner hands over the key/small item to the locker and the user collects it using the provided code.

Applications: Car wash, police station, bank, hotel, warehouse, logistics company, condominiums etc.

## Urban Lockers

Urban lockers are multifunctional lockers ideal for Smart Cities and accessible to all citizens.

They can be configured with many different options:

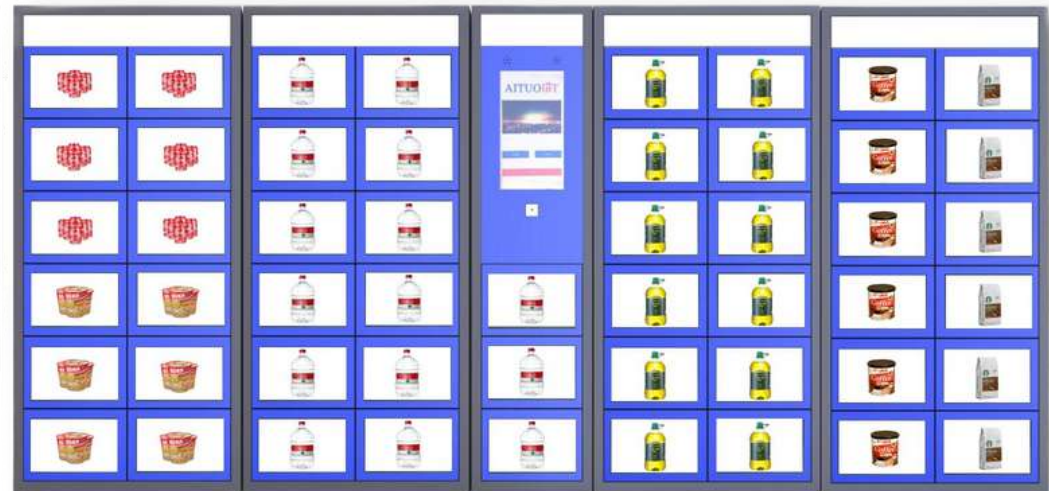

- Charging station for battery-operated devices such as smartphones, scooters (battery and/or solar panel power supply)
- Delivery of parcels and goods
- Short term deposit of objects or luggage
- Exchange of goods
- SOS station for emergency calls
- Payment terminal
- WiFi hotspot

## Vending Lockers

These practical lockers are used to sell different types of goods.

They have a payment system and make it possible to buy the previously deposited goods.

Applications: supermarkets, shopping malls, apartments, tourist spots, amusement parks, hotels, offices, etc.

## Library Lockers

These lockers are ideal to collect and deposit books, magazines and other similar products.

They are very useful in libraries and bookshops but perfect also for transit places like stations, airports, shopping centres and hospitals.

## Refrigerated/heated Lockers

These lockers can be heated and refrigerated to better manage food deliveries and controlled temperature products. They are therefore also ideal for the delivery of pharmaceutical products.

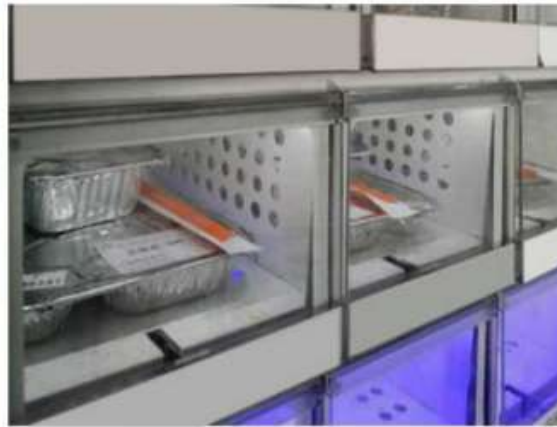

Supported temperatures vary from  $-2^{\circ}$  to  $8^{\circ}$ , up to  $45^{\circ}$ .

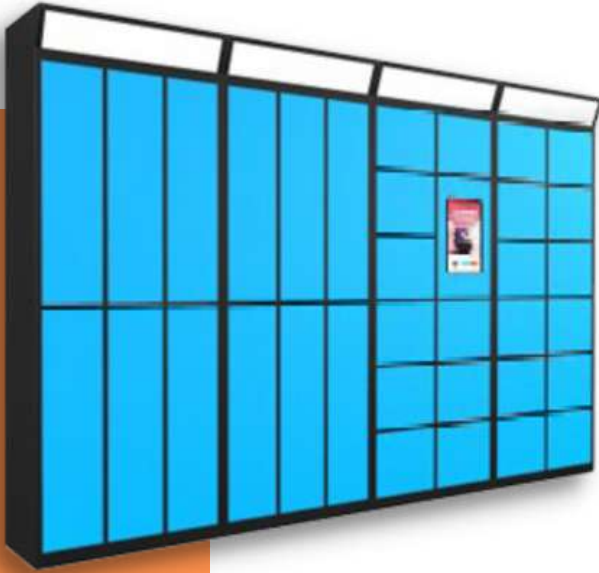

Refrigerated and heated lockers are created especially for food delivery and they help operators in the large-scale distribution and in the food sector to efficiently manage the delivery of food and ready meals because they provide refrigerated, frozen and heated compartments.

Applications: Logistics companies, supermarkets and the trade of fresh products, restaurants with take-away and delivery services, schools, pharmacies

## Refrigerated/heated Lockers

## PinLockers

A PinLocker is a modular system of lockers, which allows to manage the deposit of goods safely and automatically through a PIN code. This locker allows the user not only to easily deposit and collect objects on their own, but also to deposit something for someone else to pick up, 24/7 and contactless.

It works like hotel safes, without any server or the need for internet connection.

This locker allows the user to chose a six-digit PIN code and use it to collect what they had deposited simply following the audio/video instructions given on the spot.

## Traditional Lockers

Non-automated traditional lockers which can be opened by keys, padlock and key, combination, or other modes.

They can be customized and composed with different shelves and dividers.

## **Traditional Lockers with charging station**

Multifunctional lockers which allow not only to store goods but also to recharge devices in total safety.

## ABS Lockers

These lockers are made of durable ABS plastic, which makes them suitable for high-traffic areas, such as schools, playgrounds and water parks, sport fields, hospitals and gyms.

They can be opened/closed by keys, padlock and key or combination.

## Optionals

- Charging station for electronic devices
- POS for payments
- Outdoor canopy
- Surveillance camera
- Content detection sensors

## Software

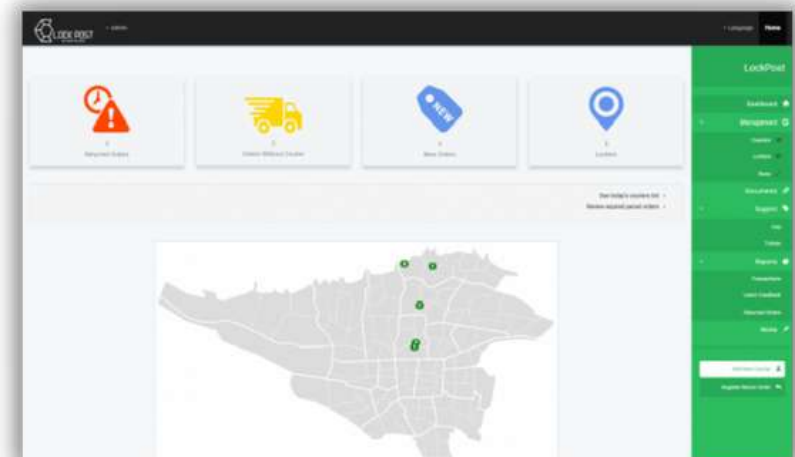

The web management platform is a cloud managed, reliable and high-performance service that allows you to manage and locate the locker(s) on your network.

The software application allows to manage the SmartLocker as well as the various operating functions of the control panel, such as:

- Deposit
- Collection and return of parcels
- Short term deposit service
- P2p exchange of parcels or goods

The cloud server allows to:

- Check the status of the locker and of every transaction
- Recover the opening PIN code in case of loss
- Set maximum storage time
- Remotely open the boxes
- Check the boxes status

## Software

LockerFarm offers two distinct operating platforms according to the customer.

### **LF Cloud Software**

Through the LockerFarm software the customer can independently manage the local and remote activity of the lockers, or alternatively they can let our operational center manage it, against a monthly fee.

### **LF Suite**

Aimed at those who manage multiple lockers, LF Suite is a powerful system which, in addition to the normal operating functions, offers innovative solutions, such as:

- creation of the delivery
- advanced booking of a locker box
- rental of boxes or columns to third party companies within the same locker
- full statistics
- interfacing with external hardware devices such as POS for payment, surveillance cameras, sensors of various kinds and alarms

Both softwares can be adapted to the users' individual needs and can be integrated into your applications or APPs via API.

## Thanks to our software, collection is simple, safe and secure.

### **Delivery & Collection**

Access the locker

Identify yourself by QR or PIN Code if you are a registered courier

Select the box dimensions

Select the recipient by name, e-mail address or phone number

Put the parcel in and close the box

The recipient will be notified with a PIN/QR Code to collect the item

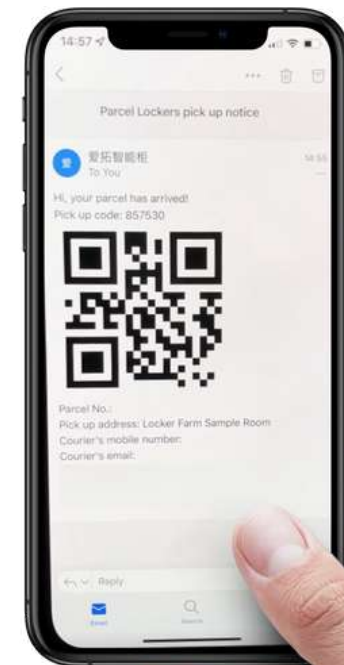

### **Short-term deposit**

Create or use a QR code

Access the locker and deposit the parcel through the QR Code

Send the QR Code to the recipient (by whatsapp, email, sms)

Click on the Collect icon, open the box through the QR Code
